Reviews of hundreds of tools (hardware and software) for embedded systems.

### **Hardware and software tools for embedded developers**

An embedded system is a computer that has been built to solve only a few very specific problems and is not easily changed. In contrast, a general-purpose computer can do many different jobs, and can be changed at any time with new programs for new jobs. An embedded system usually does not look like a computer, often there is no keyboard or monitor or mouse.
