Interleaving ADCs: Unraveling the Mysteries. by Gabriele Manganaro and David H. Robertson Download PDF Time interleaving is a technique that allows the use of multiple identical analog-to-digital converters [1] (ADCs) to process regular sample data series at a faster rate than the operating sample rate of each individual data converter.

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor.
